Chapter 1. sum-up

What is Sum-up of numbers

Here you will learn what is sum-up

Subtraction is the process of finding the **addition between two numbers** by taking adding number into another.

When using a calculator, you **enter the first number, press the plus (+) button, enter the second number, then press equals (=)** to get the result.

It shows how much remains after adding one value into another.

How to sum-up numbers

Here you will find instructions about using the sum-up feature of JPS calculator

To successfully sum-up numbers, you must know what is sum-up

1. Enter the first number.
2. Choose the plus (+) button.
3. Enter the second number.
4. Choose the equals (=) button.

The results from Sum-up are displayed

You want to add 2 from 3 . The equation will look like $3+2=5$. You enter 3 , press + , enter 2, press equals

The result 5 displays on screen

Chapter 2. subtract

What is subtract of numbers

Here you will learn what is subtraction

Subtraction is the process of finding the **difference between two numbers** by taking one number away from another.

When using a calculator, you **enter the first number, press the minus (-) button, enter the second number, then press equals (=)** to get the result.

It shows how much remains after removing one value from another.

How to subtract numbers

Here you will find instructions about using the subtraction feature of JPS calculator

To successfully subtract numbers, you must know what is subtraction

1. Enter the first number.
2. Choose the minus (-) button.
3. Enter the second number.
4. Choose the equals (=) button.

The results from subtractions are displayed

You want to subtract 2 from 3 . The equation will look like $3-2=1$. You enter 3 , press - , enter 2, press equals

The result 1 displays on screen

Chapter 3. divide

What is divide of numbers

Here you will learn what is division

Division is the process of **splitting** a number into equal parts.

When using a calculator, you enter the first number, press the divide ($\div$ or $/$) button, enter the second number, then press equals (=) to get the result.

It tells you how many times one number fits into another.

How to divide numbers

Here you will find instructions about using the division feature of JPS calculator

To successfully divide numbers, you must know what is division

1. Enter the first number.
2. Choose the divide ($/$) button.
3. Enter the second number.
4. Choose the equals (=) button.

The results from divisions are displayed

You want to divide 2 from 6. The equation will look like $6/2=3$. You enter 6 , press $/$, enter 2, press equals

The result 3 displays on screen

Chapter 4. multiply

What is multiply of numbers

Here you will learn what is multiplication

Multiplication is the process of adding a number to itself a certain number of times.

On a calculator, you enter the **first number**, **press the multiply ($\times$ or $*$) button**, **enter the second number**, then **press equals (=)** to get the result.

It shows the total when one number is repeated multiple times.

How to Multiply numbers

Here you will find instructions about using the multiply feature of JPS calculator

To successfully multiply numbers, you must know what is multiply

1. Enter the first number.
2. Choose the multiply ($\times$) button.
3. Enter the second number.
4. Choose the equals (=) button.

The results from multiplications are displayed

You want to multiply 2 from 3 . The equation will look like $3 \times 2 = 6$. You enter 3 , press X , enter 2, press equals

The result 6 displays on screen
